

Downhole Shut-Off Valve

OVERVIEW

The Logan Downhole Shut-Off Valve offers the capability of holding pressure from above or below. It is opened or closed by rotation of the tubing. With its large bore, the DHSOV allows running P-T bombs, perforating guns, etc. Its valve is compatible with Lok-Set, "TSN" and Permanent Packers so that tubing can be left in tension, compression, or neutral.

- Provides smooth bore to avoid pressure drops and turbulence
- Insensitive to pressure variations in tubing or annulus
- Offers resilient seal for low-pressure, and metal-to-metal seal for high pressure

Tubing (in)	Max OD (in)	Min ID (in)	Connection
4.50 and up	3.844	1.80	2.375 EU8Rd
5.50 and up	4.500	2.36	2.875 EU8Rd
