

KS-3 Packer

The Logan Kline Tools KS-3 Packer is a **single-grip packer** without an upper hold-down device for use in wells that contain negligible differential pressure from below. The tool is set by a quarter-turn to the right at the packer then compression-set with set down weight. The packer is released by straight pick-up and features a large bypass area in order to prevent swabbing of elements during run-in and retrieval.

Features

- Large internal bypass
- Straight pick-up release
- Full bore opening for fluid flow and wireline tool access

Options

- Extended length mandrel available
- P110 mandrel available
