## MultiStim Fracture Isolation System

# MultiStim Flow Back Ball Catcher

- Works in conjunction with the 3J Seal Assembly
- Captures balls during flow back prior to seat retrieval
- Simple deployment

The MultiStim Flow Back Ball Catcher is used in conjunction with the 3J Seal Assembly. After the frac, and prior to retrieving or milling out seats if desired, the well can flow back without worry of the balls becoming lodged in the flow loop or wellhead.

The Ball Catcher has a flow through area ten times larger than the inside diameter of the liner. The internal finger basket traps the balls as they flow back, thus keeping them contained until the Ball Catcher is retrieved at a later date.

### Simple Operation

The Ball Catcher is run in and landed in the 3J Receptacle with the assistance of the 3J Seal Assembly and a 3-1/2" On/Off Tool. The 3J Seal Assembly is latched into the 3J Receptacle and the On/Off Tool is released, leaving the entire assembly in the well.

Prior to retrieving or milling up seats, the On/Off is run in, latches onto the Ball Catcher, and is removed from the well.

### Design and Manufacturing Standards

The MultiStim Flow Back Ball Catcher and MultiStim Fracture Isolation System components are designed and manufactured to API Q1 standards at our certified manufacturing facility.
